

What is GCP?

GCP (Google Cloud Platform) is Google's free developer console — the same place where Gmail, Maps, and YouTube register their apps. You need it to give **arama OS** permission to save your data privately in your Google Drive. **It is free** — you will not be charged unless you enable billing, which is not needed here.

Account to use:	aramaasia@gmail.com
Data stored in:	Your Google Drive (hidden — not visible to anyone else)
Cost:	Completely free
Time required:	5–8 minutes, one time only

STEP 1

Go to Google Cloud Console

- Open your browser and go to:

URL: <https://console.cloud.google.com>

- Sign in with aramaasia@gmail.com (if not already signed in)
- You will see the Google Cloud dashboard.

STEP 2

Create a New Project

- Click the project dropdown at the top (it may say "Select a project")
- Click "NEW PROJECT" in the top right of the popup
- Project name: arama-wellness
- Click "CREATE" and wait 10 seconds for it to be ready
- Make sure the new project is selected in the dropdown

STEP 3

Enable Google Drive API

- In the left sidebar click "APIs & Services"
- Click "Enable APIs and Services" (+ button at top)
- Search for: Google Drive API
- Click on it, then click the blue "ENABLE" button
- Wait for it to enable (green checkmark appears)

STEP 4

Set Up OAuth Consent Screen

- Go to: APIs & Services > OAuth consent screen
- Select "External" and click CREATE
- App name: arama OS
- User support email: aramaasia@gmail.com
- Developer contact email: aramaasia@gmail.com
- Click "SAVE AND CONTINUE" on each screen
- On the "Test users" screen, click "+ ADD USERS"

- Add: aramaasia@gmail.com then click SAVE
- Click "BACK TO DASHBOARD"

STEP 5 Create OAuth Client ID (the key)

- Go to: APIs & Services > Credentials
- Click "+ CREATE CREDENTIALS" at the top
- Select "OAuth client ID"
- Application type: Web application
- Name: arama-os-web
- Under "Authorised JavaScript origins" click "+ ADD URI"
- Add URI 1: https://aramaoperations.github.io
- Add URI 2: http://localhost
- Click "CREATE"

STEP 6 Copy Your Client ID

- A popup appears showing "Your Client ID" — it ends with .apps.googleusercontent.com
- Click the COPY icon next to the Client ID
- Keep this page open or note it down

STEP 7 Connect Inside arama OS

- Open ARAMA_OS_V7.html in Chrome
- Log in as superadmin
- Go to: Config > Drive Sync tab
- Paste your Client ID into the "Google OAuth Client ID" field
- Click "Save & Connect"
- A Google sign-in popup will appear — sign in with aramaasia@gmail.com
- Click "Allow" when it asks for Drive access
- The sync dot in the header turns GREEN — you are connected!
- Click "Force Sync Now" to upload all data to Drive

After Setup — How Sync Works

Auto-sync	Every time you make a change, data saves to Drive after 6 seconds
Sync dot colours	Green = synced Yellow = saving Grey = offline Red = error
Multiple devices	Open the OS on any device with same Chrome + Client ID and load from Drive
Offline mode	Works without internet — data stays in browser, syncs when back online
Data location	Stored in your Drive > App Data folder (hidden, only this app can see it)

IMPORTANT

Do NOT enable billing on GCP. This setup uses only free APIs. If Google asks you to enter a credit card for billing, click "Skip" or "Remind me later". The Drive API used here is completely free with no usage limits for personal apps.
